## impra<sup>®</sup>lan

### The expert system for the industrial surface coating of wood

impra<sup>\*</sup>lan is a water-based system designed for the industrial surface coating of wood. Our products are as well-suited to wood as they are to highly complex industrial production processes. Irrespective of whether the wood to be treated is used in window frame construction, on balconies, fences or facades, the demands on our products are high. We guarantee prompt delivery and competent on-site service to help ensure the best possible result.

## profilan®

### Surface coatings for professionals

profilan<sup>®</sup> is the water- and solvent-based professional programme for the protection and improvement of wood used in- and outdoors.

Our matched primers, wood stains and opaque paint systems are guaranteed to meet even the most demanding design requirements. The challenge for our products has been set: the best possible workability, impressive results and optimum protection!

These are the goals we set in our research and development department to keep coming up with new ideas and products for you, linked with wood preservation, surface systems and maintenance.

## impra<sup>®</sup>tec

### Active wood protection

The impra®tec product range combines efficacy and modern active ingredients to combat wood pests and better protect human health and the environment.

Our products fully comply with all current legal requirements.

Detailed information on our products can be found in the relevant technical leaflet.
